

# Deutsche Schule Tokyo Yokohama

東京横浜独逸学園

We use LabStats a little differently than most universities. We use it to keep track of our system administration. This gives us information that, prior to LabStats, was either hard to maintain or entirely unavailable.

With LabStats, we investigate problems with under-used computers, such as the poor condition of a keyboard, mouse, or display, or whether or not a computer is missing software. We use an on-screen active desktop graph of all machines to help us instantly determine which machines were left on at the end of the day, or which machines were not shut down after our nightly automated 1 a.m. maintenance schedule.

We use AppUse to investigate if software that hasn't been used in a long time can be removed to reduce clutter and maintenance.

We have found LabStats to be very useful for our specific needs.
